CONTENTS

Volume 50, Issue Nos. 1–12 (2006)

International Journal for
NUMERICAL METHODS IN FLUIDS

Issue No. 1, 10 January

Rotating incompressible flow with a pressure Neumann condition: J. R. Claeyssen, E. B. Asenjo and O. Rubio 1

Large eddy simulation (2D) of spatially developing mixing layer using vortex-in-cell for flow field and filtered probability density function for scalar field: J. K. Wang and R. E. Milane 27

Extension of an explicit finite volume method to large time steps (CFL>1): application to shallow water flows: J. Murillo, P. García-Navarro, P. Brufau and J. Burguete 63

Estimate of the truncation error of finite volume discretization of the Navier–Stokes equations on colocated grids: A. Syrakos and A. Goulas 103

Issue No. 2, 20 January

Quadratic programming algorithm for wall slip and free boundary pressure condition: C. W. Wu and H. X. Sun 131

On accurate boundary conditions for a shape sensitivity equation method: R. Duvigneau and D. Pelletier 147

On coupling the Reynolds-averaged Navier–Stokes equations with two-equation turbulence model equations: S. Lee and D. W. Choi 165

Two-dimensional implicit time-dependent calculations on adaptive unstructured meshes with time evolving boundaries: P. T. Lin, T. J. Baker, L. Martinelli and A. Jameson ... 199

Meshless numerical simulation for fully nonlinear water waves: N.-J. Wu, T.-K. Tsay and D. L. Young 219

A study of the recirculating flow in planar, symmetrical branching channels: Y.-Y. Tsui and C.-Y. Lu 235

Droplets on patterned substrates: Water off a beetle's back: A. Dupuis and J. M. Yeomans 255

Issue No. 3, 30 January

Microstructure development in concentrated suspensions in a spinning ball rheometer: A. M. Grillet and L. A. Mondy 263

A Riemann solver and upwind methods for a two-phase flow model in non-conservative form: C. E. Castro and E. F. Toro 275

Flux and source term discretization in two-dimensional shallow water models with porosity on unstructured grids: V. Guinot and S. Soares-Frazão 309

Comparison of Galerkin and control volume finite element for advection–diffusion problems: M. J. Martinez 347

Finite analytic boundary condition for a higher-order finite analytic scheme: S. H. Lee and B. K. Soni 377

Issue No. 4, 10 February

Swelling effect on the dynamic behaviour of composite cylindrical shells conveying fluid: M. H. Toorani and A. A. Lakis 397

Fourth-order compact formulation of Navier–Stokes equations and driven cavity flow at high Reynolds numbers: E. Erturk and C. Gökçöl 421

Flow simulation on moving boundary-fitted grids and application to fluid–structure interaction problems: M. Engel and M. Griebel 437

Modelling spray impingement using linear stability theories for droplet shattering: S. S. Yoon and P. E. DesJardin 469

Control of transient flow in irrigation canals using Lyapunov fuzzy filter-based Gaussian regulator: Ö. F. Durdu 491

Three-dimensional lubrication flow of a Herschel–Bulkley fluid: J. Zhang, R. E. Khayat and A. P. Noronha 511

Issue No. 5, 20 February

Reduced-order controllers for control of flow past an airfoil: S. S. Ravindran 531

Lyapunov spectrum determination from the FEM simulation of a chaotic advecting flow: P. Carrière 555

Multiple semi-coarsened multigrid method with application to large eddy simulation: F. E. Ham, F. S. Lien and A. B. Strong 579

Incompressible SPH simulation of wave breaking and overtopping with turbulence modelling: S. Shao 597

Finite element solution to passive scalar transport behind line sources under neutral and unstable stratification: C.-H. Liu and D. Y. C. Leung 623

Issue No. 6, 28 February

A 3-D non-hydrostatic pressure model for small amplitude free surface flows: J. W. Lee, M. D. Teubner, J. B. Nixon and P. M. Gill 649

Pressure boundary condition for the time-dependent incompressible Navier–Stokes equations: R. L. Sani, J. Shen, O. Pironneau and P. M. Gresho 673

A short note on the reattachment length for BFS problem: P. R. Kanna and M. K. Das ... 683

Simulation of viscous water column collapse using adapting hierarchical grids: D. M. Greaves 693

Time-dependent flow across a step: the slip with friction boundary condition: V. John and A. Liakos 713

An immersed boundary method for incompressible flows using volume of body function: D. Pan 733

Non-Newtonian blood flow dynamics in a right internal carotid artery with a saccular aneurysm: A. Valencia, A. Zarate, M. Galvez and L. Badilla 751

Erratum 765

Issue No. 7, 10 March

Implicit application of non-reflective boundary conditions for Navier–Stokes equations in generalized coordinates: X. Chen and G.-C. Zha 767

Optimization of the nonlinear convergence rate of the SIMPLER Picard algorithm for steady incompressible internal flows through enforcement of continuity projections: S. Kumar and P. J. Smith 795

A continuous sensitivity equation method for time-dependent incompressible laminar flows: H. Hristova, S. Étienne, D. Pelletier and J. Borggaard 817

On the efficiency of linearization schemes and coupled multigrid methods in the simulation of a 3D flow around a cylinder: V. John 845

Large eddy simulation of homogeneous shear flows with several subgrid-scale models: Y. Wang, F. G. Jacobitz and C. J. Rutland 863

Issue No. 8, 20 March

Solid-particle erosion in the tube end of the tube sheet of a shell-and-tube heat exchanger: M. A. Habib, H. M. Badr, S. A. M. Said, R. Ben-Mansour and S. S. Al-Anizi 885

Redesign of a sharp heel draft tube by a validated CFD-optimization: B. D. Marjavaara and T. S. Lundström 911

On uniformly accurate high-order Boussinesq difference equations for water waves: Y. Toledo and Y. Agnon 925

Adjoint approach of the spatial sensitivity to disturbances of internal flows with free surface: O. Bouizi and C. Delcarte 947

A short note on the entrainment and exit boundary conditions: P. R. Kanna and M. K. Das 973

Effect of blockage on critical parameters for flow past a circular cylinder: B. Kumar and S. Mittal 987

Issue No. 9, 30 March

The numerical study of roll-waves in inclined open channels and solitary wave run-up: Y.-T. Que and K. Xu 1003

Second-order entropy diminishing scheme for the Euler equations: F. Coquel, P. Helluy and J. Schneider 1029

Extension of a high-resolution scheme to 1D liquid–gas flow: J. R. García-Cascales and J. M. Corberán-Salvador 1063

Computational modelling of variably saturated flow in porous media with complex three-dimensional geometries: D. McBride, M. Cross, N. Croft, C. Bennett and J. Gebhardt 1085

Erratum 1119

Issue No. 10, 10 April

Special Issue:
Multidimensional Positive Definite Advection Transport Algorithm Methods

Editorial

Editorial: J. Szmelter 1121

Review Article

Multidimensional positive definite advection transport algorithm: An overview: P. K. Smolarkiewicz 1123

Research Articles

The relationship of MPDATA to other high-resolution methods: W. J. Rider 1145

Forward-in-time upwind-weighted methods in ocean modelling: M. W. Hecht 1159

The energetics of wave-driven mean flow oscillations: N. P. Wedi 1175

MPDATA: Gauge transformations, limiters and monotonicity: L. G. Margolin and M. Shashkov 1193

MPDATA and grid adaptivity in geophysical fluid flow models: J. M. Prusa and W. J. Gutowski 1207

Numerical simulation of sand dune evolution in severe winds: P. Ortiz and P. K. Smolarkiewicz 1229

Application of the multidimensional positive definite advection transport algorithm (MPDATA) to environmental modelling on adaptive unstructured grids: N. N. Ahmad, D. P. Bacon, M. S. Hall and A. Sarma 1247

MPDATA error estimator for mesh adaptivity: J. Szmelter and P. K. Smolarkiewicz ... 1269

Issue No. 11, 20 April

Special Issue:
Advances in Computational Heat Transfer

Editorial: G. de Vahl Davis and E. Leonardi 1295

Spectral element benchmark simulations of natural convection in two-dimensional cavities: T. Gjesdal, C. E. Wasberg and B. A. P. Reif 1297

Three-dimensional lattice Boltzmann BGK model and its application to flows with heat transfer in a rectangular microchannel: Y. T. Chew, X. D. Niu and C. Shu 1321

Quantitative V&V of CFD simulations and certification of CFD codes: F. Stern, R. Wilson and J. Shao 1335

Volumetric methods for evaluating irreversible energy losses and entropy production with application to bioengineering flows: K. Moyle, G. Mallinson and B. Cowan 1357

Issue No. 12, 30 April

On the geometric conservation law in transient flow calculations on deforming domains: Ch. Förster, W. A. Wall and E. Ramm 1369

A mesh patching method for finite volume modelling of shallow water flow: K. Hu, C. G. Mingham and D. M. Causon 1381

Euler flow in a supersonic mixed-compression inlet: M. K. Jain and S. Mittal 1405

Numerical modelling of 3D stratified free surface flows: a case study of sediment dumping: P. Lin and D. Wang 1425

Numerical investigation of the flow front behaviour in the co-injection moulding process: F. Ilinca, J.-F. Hétu and A. Derdouri 1445

Spatial instability of a viscous liquid sheet: S. G. Chuech 1461
